LED Oysters

Long lasting durable fittings

Adaptable Oysters

Haneco's oysters are practical ceiling lights for indoors and under eaves. There are models with Tritone colour temperature selection, emergency batteries in case of power failures and/or programmable occupancy sensors.

Easy installation

Our Led oysters have mounting holes in the base for no-hassle installation. The diffusers are easily removed for adjustment and cleaning.

Choice of size

The oysters resemble one another in appearance but differ in size and function. Three sizes are available – 300, 350 and 400mm diameter.

Accreditations

Some of our oysters (PURO 400 Multi standard and PURO 300 Multi) are listed on the government energy savings schemes VEET, REES & IPART. And some are suitable for food preparation areas with an HACCP food safe rating.

LED Oyster Features

Tritone
Tritone models give you the versatility to change between warm, neutral or cool white at the flick of a switch.
It's great for last minute changes of mind or for the advantage of keeping only one model on the shelf or in the van.

Emergency
Emergency models come with batteries that automatically operate the light during power outages. They can be configured in maintained or non-maintained mode.

Food grade rating
The PURO 400 Multi, the PURO 300 Multi and the PLUTO range of oyster lights are food grade rated by HACCP Australia.

Intellisensor
Intellisensor is a set and forget programmable occupancy sensor that ensures the light is only fully illuminated when someone is in the space.
